Christopher A. Velez

COMPUTER ENGINEERING STUDENT (B.S. EXPECTED DEC 2026)

925-383-4565 | christopher.al.velez@gmail.com | linkedin.com/in/christopher-velez-437704264 | github.com/CrashPr0 | chrisvelez.dev | San Jose, CA (Bay Area)

PROFESSIONAL SUMMARY

Computer Engineering student at San José State University (B.S. expected Dec 2026) building XR/VR, robotics, and AI systems. Shipped 10 AR, VR, and WebXR projects in Unity for Meta Quest, ran programmed robots live at 3-4 major events (the largest a 100-person workshop), and taught Unity and Meta Quest Pro to 26 high school students. Builds an LLM-powered RAG advising assistant on Azure OpenAI as part of a 4-person senior project team. Currently on the Robot Pilot Team at Figure, running deployment testing on a new robot build.

CORE COMPETENCIES

XR / VR / AR Development | Robotics & Human-Robot Interaction | AI Tools & RAG Systems | Technical Solutions & Troubleshooting | Technical Teaching | Live Demos & Events | Digital & Embedded Systems | Documentation

WORK EXPERIENCE

Figure (Contract)

Aug 2026 - Present

Robot Pilot Team

San Jose, CA

- Pilot robots via teleoperation on swing shift, keeping remote sessions stable through each run.
- Run deployment testing on a new robot build as part of a pilot team chosen by the head deployment engineer.
- Document each shift in handoff notes, letting the next crew pick up without redoing setup.
- Handle a proprietary robotics stack under strict IP controls on what can be seen, logged, or shared.

Meta Summer Academy (Mission Bit)

Jun 2026 - Aug 2026

Teaching Assistant - Virtual Reality

Menlo Park, CA

- Taught Unity and Meta Quest Pro to 26 high school students at Meta HQ through twice-weekly lectures and live coding.
- Coached students 1-on-1 on their projects and debugged hardware in class, keeping sessions focused on building.

San José State University, School of Information

Jun 2025 - Aug 2026

Technology Assistant

San Jose, CA

- Chosen by the School of Information director to program the school's robots for the California Library Association.
- Scripted SoftBank Pepper and LG CLOi behaviors in Choregraphe and ran them live at 3-4 major events, the largest a 100-person workshop.
- Troubleshot hardware and software live at events of 70-80 attendees; documented setups so each run was repeatable.
- Created XR, AI, and hologram installations, including Seeking Immortality, on Meta Quest and HoloLens.
- Prepared 3D-scanned and photogrammetry assets for live public demos.

Martin Luther King Jr. Library

Sep 2023 - Jun 2025

Virtual Reality Software Engineer

San Jose, CA

- Shipped 10 AR, VR, and WebXR projects in Unity for Meta Quest, writing Python and C# scripts to automate device setup and data workflows.
- Kept 30+ headsets and motion-capture systems running through firmware updates, diagnostics, and configuration.
- Ran 3 AR/VR workshops.
- Assessed $20K of candidate lab hardware, comparing embedded specs and communication interfaces.

PROJECTS

iSchool Advising Chatbot

Senior Project

Team of 4 building an LLM-powered RAG assistant that supports academic advisors with cited answers from official program pages, evaluated on a 21-question test set. Students in distress are routed to a human handoff path instead of an automated reply.

Python, Azure App Service, Azure OpenAI, RAG

CyVerse Cybersecurity Teaching Game

Primary Developer

Engineer most of a WebGL game teaching identity and access management and the CIA triad; 4 levels built and a 294-question Security+ bank turned into in-game content. Recently passed a playtest.

WebGL, Unity

Shark's Way WebAR Walking Tour

Client Project

Built a WebAR tour covering 100+ painted sharks across downtown San Jose. Adjusted scope with the client after wayfinding was cut and unreliable automatic location placement was removed.

MindAR, 8th Wall

EDUCATION

B.S. Computer Engineering San José State University

Expected Dec 2026

San Jose, CA

Coursework: Microprocessor Design; Digital Design; Operating Systems Design; Electronics for Computing Systems; Machine Learning.

SKILLS

Languages: C, C++, C#, Python, JavaScript, x86 assembly **Systems:** Linux, Windows, macOS; USB and serial protocols; Git

Tools: Vivado, Unity, Unreal Engine, Choregraphe, A-Frame, AR.js, MindAR

Hardware: Oscilloscopes, logic analyzers, Pepper, LG CLOi, Meta Quest, HoloLens, 3D scanning, mocap
